DETAILED ACTION

Allowable Subject Matter

The following is an examiner's statement of reasons for allowance: The prior art fails to disclose an auto-operated dip switching mechanism having, inter alia, a strong-light detector being induced when light projected from an oncoming car has intensity exceeded a preset value, and causing a strong-light signal circuit to produce a strong-light signal, with which a switching control circuit is immediately enabled to switch headlights of said car from high beams to low beams, and said switching control circuit automatically switching said car from low beams to high beams when said strong-light signal circuit stops sending said strong-light signal (claim 1). The remaining claims 2-6 are allowed by virtue of their dependencies on the independent claim. Hence, the examiner has allowed claims 1 through 6.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Rosenblum, Patent No. 4,236,099; Stam, Patent No. 6,403,942; Stam et al., Patent No. 6,281,632; Irland et al., Patent No. 3,083,294; Beckman et al., Patent No. 2,850,673.

None of the above patents discloses the auto-operated dip switching mechanism, as recited.
